

## PLANT YOUR OWN HERB GARDEN

### What you need:

Ask an adult to help you before you start your garden

- One – 18-24-inch planter **or** several 4-6-inch planters (you can section off a large pot or plant each herb in its own pot)
- Potting Soil
- 1 Trowel
- Herb seeds

### Here are a few suggestions of herbs:

Oregano  
Basil  
Parsley  
Dill  
Coriander  
Sage  
Rosemary  
Cilantro

### Instructions:

- Fill your pot or pots with soil
- Read the instructions on the packet of herb seeds to see how deep you need to plant them in the soil
  - \*Remember – Don't plant your seeds too close together because your herbs need room to breathe and grow!
- Water your seedlings thoroughly when the dirt feels dry
- Put your pots in a location where they can get at least 6 hours of sunlight each day
- Make labels for each type of herb so that you remember what you planted and where it is
- You can use your herbs as soon as they've grown enough to stay strong after you pick them
